-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 12 February 2004.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-21 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-21 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

***DETAILED ACTION***

1. This office action is in response to application filed on February 12, 2004. Claims 1-21 are presented for examination.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tang et al. (ConNexus Awarenex: Extending awareness to mobile users, by John C. Tang, et al. March 4, 2001) in view of Manabe et al. (US Pat. No. 6,584,494, hereafter Manabe).

As to claim 1, Tang taught the system as claimed including a system for automated availability information (see Tang, pages 221-228), comprising:  
dissemination of presence and a schedule publication element configured to acquire schedule information associated with at least one user (Tang, page 222, L. col., under The ConNexus User Interface Design, awareness cues... ); a schedule management element configured to receive schedule information from said schedule publication element (Tang, page 222, L. col., contact list);

a schedule distribution element receptive of said integrated schedule information from said schedule said schedule management element and being responsive to subscribing element to maintain a data store identifying those subscribers to receive notifications regarding presence and availability information and to effect the dissemination of presence and availability to said subscribers (Tang, page 222, R. col. contact toolbar).

The system of tang does not clearly teach of "Storage system configured to store integrated schedule element and having storage system information based on said received schedule information". However, it is well known in the art at the time the invention was made to store the contact list information on a storage place in order for the users or subscribers can find the contact information from there and be able to make contact when the contact person is available. Therefore, it would have been obvious for a person ordinary skill in the art at the time the invention was made to store the information on a storage medium in order to be able to retrieve the information.

Additionally, the system of Tang does not clearly teaches of "registration services where a subscriber registers to receive notifications regarding presence and availability information". However, registry system in which the users are registered to receive information regarding presence and availability of other users is well known in the art as it is evidenced by Manabe (Manabe, col. 1, lines 26-38, col. 2, lines 16-26, and col. 6, lines 51-62), for the reason to be able to notify and receive the availability information in an IM system. Therefore, it would have been obvious for a person ordinary skill in the art at the time the invention was made to use the

Art Unit: 2195

registry method of Manabe for notifying and receiving notification into the Awarenex system of Tang, because this makes the system of Tang more versatile and efficient.

As to claim 2, Tang teaches of IM on page 222, L. column.

As to claim 3, the system of Tang teach of the human interface through which user inputs schedule information in Figure 1, and Figure 2.

As to claim 4, the system of Tang teach of schedule publication element is adapted to obtain schedule information from a calendar service (page 222, R. col. last paragraph, starting with “In the Contact Toolbar...”).

As to claims 5-6, the system of Tang teach of schedule management element communicating with said schedule distribution element using a push/pull interface whereby information retrieved from said storage system is automatically sent to said schedule distribution element (Tang, page 222, R. col. contact toolbar, and last paragraph to page 223 L. col. first partial paragraph, access to on line director card).

As to claim 7, the system of Tang teach of calendar of the user, which is open mode and make the entire schedule available (Tang, page 224, L. col. under Preliminary Use Experience With a Working Prototype, second paragraph).

Art Unit: 2195

As to claim 8, the system of Tang teach of updating user's schedule on page 222, L. col. last paragraph (under contact list third element, the user is engaged in any computer-media communication activities (shown by activity indicator).

As to claim 9, Tang teach of said schedule distribution element controls the dissemination of presence and availability information in a sliding-window mode whereby a available to subscribers predefined portion of a user's schedule is made (page 222, R. col. Fig.2).

As to claims 10-11, Tang teach of said predefined portion is defined by a sliding window measured from the present time until a predetermined period of time thereafter (Tang, page 225, L. col. last paragraph "current or next occurring appointment scheduled in his on-line calendar).

As to claims 12-14, Tang teach of said schedule distribution element is configured to send notification to subscribers of schedule change information when said sliding window encounters status changes in the user's schedule (Tang Fig. 7, awareness information on all devices in each local).

As to claim 15, Tang teach of said schedule subscribing element communicates with said schedule distribution element to negotiate whether to accept a subscription request (page 223, L. col. the paragraph before the last partial paragraph, starting with "When a user...").

As to claim 16, Tang teach of said schedule distribution element controls whether to accept a subscription request (ignore the IM request, page 223, L. col. the paragraph before the last partial paragraph).

T

As to claim 17, Tang teach of said subscription request identifies preferences associated with a given subscriber that mediate how information is disseminated to that subscriber (page 222, R. col. last paragraph).

As to claim 18, Tang teach of said preferences are stored in said data store identifying those subscribers who have registered to received notifications (the relevant communication resource, page 222, R. col. last paragraph).

As to claim 19, Tang teach of said schedule distribution element is configured to selectively accept a subscription request even if the identified preferences are not met (page 223, L. col. first partial paragraph).

As to claim 20, Tang teach of said elements are interactive with one another via network communication (the environment of Tang is a network communication, page 224, R. col. The User Interface Design).

As to claim 21, Tang teach of at least some of said elements are interactive with one another via programming interfaces (page 222, R. col. last paragraph).

Art Unit: 2195

### Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Majid A. Banankhah** whose telephone number is (571) 272-3770. The examiner can normally be reached on Monday – Friday, 7:00 AM – 3:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, **Meng-Ai An** can be reached on (571) 272-3756.

Any inquiry of a general nature or relating to the status of this application should be directed to the **TC2100 Group** receptionist: 571-272-2100.

Information regarding the status of an application may be obtained from the patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll free).
